Subject: Dust control

In preparation for Irene, DTA confirmed that all piles were flat topped and truncated, and followed those measures with the chemical Soil Sement to reduce additional errant dust. Late friday night, in anticipation for the storm, DTA turned off all power to the plant. This also halted our dust control systems. At the time the power was turned off, it had already started raining.

The plan was to return all systems to normal operation today, but due to some unforeseen electrical problems, we were unable and hope to be back to operation tomorrow.

I intend to jeep you up to date with our progress.
