INSPECTION CHECKLIST

Permit Date or Basis	#	Requirement Narrative	Observation	Comp Status
09-20-06	9	9. FUGITIVE DUST EMISSION CONTROLS - All storage piles shall be truncated, stacker/reclaimers used to build flat top piles, and the top compacted to minimize fugitive emissions.	In their response, they said they will place additional emphasis on truncating piles as soon as practical after their profiles are modified.	In Compliance
09-20-06	8	8. FUGITIVE DUST EMISSION CONTROLS - Fugitive dust emissions from the storage piles shall be controlled by a wet suppression system capable of wetting the entire storage area. Wet suppression cycles shall be implemented in accordance with Appendix A. Each cycle shall consist of no less than 35,500 gallons of water and, with assistance from other equipment, attain 100 percent coverage of the storage area. The wet suppression system shall be provided with adequate access for inspection.	In their response, they said they will place additional emphasis on the importance of observing and reporting "out-of-service" rainbirds and placing a high priority on repair.	In Compliance
